

## PRODUCT PROFILE

### BATCH PICKING CART

Functioning as a mobile Put-to-Light system or QC station, this solution facilitates faster batch picking and ensures order accuracy.

Lightning Pick features three distinctive cart solutions to best meet your unique process requirements.

- The Operator can roam up to 100 feet from the cart and to gather multiple products simultaneously.
- Offers complete integration with a customer's host computer or WMS, orders can be sent individually or in batches to the Windows-based LP Server.
- This core solution can be configured to manage both light-directed carts and traditional pick-to-light lines for high volume products in the same facility.

### LP advantages

- Reduce the walk time and increase the productivity and quality of your Batch or Cluster Picking operations.
- A cost effective means of optimizing paper-based / cart-based pick operations without adding extensive technology to every pick face, or adding major new Material Handling Equipment (such as conveyor systems) to the facility.

## LP cart.

Industry experts agree that the best way to improve order picking productivity is to reduce walking. Typically, 60% of the time required to pick an order is spent walking to the right locations. One method of substantially reducing walk time is to pick a "batch" of several orders at the same time. The key challenge for warehouse managers is to find a way to support an employee picking multiple orders while retaining the critical accuracy of each order.

The Lightning Pick Batch Picking Cart was designed as a solution to this challenge, and offers three distinct model configurations to meet your specific order picking process.

Our classic LP Cart features a Standard Laptop computer with color LCD screen, omni directional scanner for hands free scanning, up to 16 lighted order positions and a rechargeable mobile power pack. The system maintains communications with the Lightning Pick server through a wireless LAN network.

A second application uses the advanced Lightning Pick Cluster Pick features to pick multiple orders concurrently on a cart.

Lightning Pick has also introduced the newest concept in mobile cart technology - combining voice-directed picking, RF-based QC scanning and light-directed sortation to order to optimize batch pick operations.

**DONE RIGHT. AT THE SPEED OF LIGHT.**
