

## PRODUCT PROFILE

### VOICE-DIRECTED PICKING MODULE

Lightning Pick's Voice-directed Picking Module offers a cost-effective, paperless picking alternative for applications where the number of products, product profile or pick volume does not justify a light-directed method.

- The LP Voice-directed Picking Module supports annotation of long product descriptions, quantity short, quantity skip, and repeat functions.
- The system supports scanning of product, location bar code, confirmations or spoken location check digits.

### LP advantages

- Utilizes non-proprietary Windows devices combined with Lightning Pick's unique speech direction and recognition software to provide flexibility in the desired hardware platform and configuration.
- Can support an unlimited number of voice-directed pickers in an area, working at the same time.
- The LP Voice-directed Picking module can operate as a stand alone picking system or work in conjunction with Lightning Pick's light-directed and/or RF picking solutions to form a fully integrated order fulfillment execution solution.

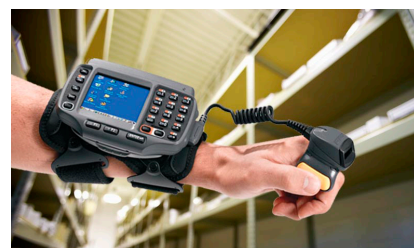

## voice-directed picking.

Optimize pick areas with the paperless, hands-free advantages of Lightning Pick Technologies' **Voice-directed Picking** module.

With Voice-directed Picking, the operator is directed to the item pick location by voice command, requiring vocal confirmation when they arrive. Confirmation can be configured to include product scan, location scan, or reading and speaking a location check digit. The system then prompts for the quantity to pick.

Lightning Pick's Voice-directed Picking uses unique speech direction and recognition software combined with non-proprietary Windows devices to provide the user with flexibility to select the best hardware platform for their application.

The LP Voice-directed Picking module can be used with Symbol Technologies' WT4000 series of wearable mobile computers. Designed for hands-free operation, the WT4000 series delivers increased productivity to industrial applications, including voice-directed order picking. Worn on either the wrist or the hip, the WT4000 series allows users to move freely and scan data, access business-critical information, and accurately perform data entry in real-time.

*DONE RIGHT. AT THE SPEED OF LIGHT.*
